InClime Celebrates 10 Years of Administering Renewable Energy Programs

InClime, a veteran-owned small business that runs technically enabled renewable energy and energy efficiency incentive programs for utilities and public entities, proudly celebrates its 10th anniversary this month. Since its launch in December 2013, InClime has established itself as an innovator and an industry leader in renewable and energy efficiency program administration. Its programs span statewide renewable energy standards, distributed solar, Community Solar, utility-specific home energy efficiency upgrades, and income verification for low- and low-to-moderate program participants. InClime's expert staff and customizable software capabilities ensure that its clients' programs are secure, efficient, and data-driven from inception. InClime's commitments to customer satisfaction, client success, and overall flexibility in program management have been the driving force behind its success.

Key highlights from InClime's first ten years in business include:

- 1. Program management:** InClime has successfully implemented and managed more than 20 unique programs across ten U.S. states, as well as two programs in Canada, facilitating the installation of more than \$1.5 billion dollars of clean energy infrastructure.
- 2. Dedicated team:** Based in Annapolis, MD but distributed across 13 states and internationally, InClime's team serves a diverse customer base.
- 3. Scalability:** With approximately \$300 million in ACH incentive payments issued and 200,000 incentive applications verified, InClime's team ensures a speedy application process and a rapid turnaround of incentive funds.

InClime expresses gratitude to its team members, clients, and partners who have contributed to its success, as well as to the dedication and investment of resources to renewable energy and energy-efficiency incentives. InClime looks forward to continued growth and innovation in its next decade.
